

D6 - Description of Alarms

Table of Contents

1. GENERAL DEFINITIONS	2
1.1 GENERAL STRUCTURE	2
1.2 RESPONSIBILITY	2
2. ALARM MESSAGES.....	3
3. INFORMATION MESSAGES	15
4. REVISION AND DOCUMENT DISTRIBUTION LIST	18

Author TAP 4	Document HSM_D6 Description of Alarms.doc		Date 1996-02-28	Version as built	Page 1
-----------------	--	--	--------------------	---------------------	-----------

1. General Definitions

1.1 General structure

hh:mm PRG SLABID [telid] Subject [Values] Consequences

hh:mm Time of appearing of the error message

PRG Short name for the Level2 program that invoked the message

SLABID Slab Identification. Only if the message is bound to a slab

telid Telegram id with which the program was invoked

Subject Error text shows what happened

Values Processes values if they are the reason for the message

Consequences Consequences to the fault

1.2 Responsibility

OPRM RM-Operator

OPFM FM-Operator

OPWB Weigher/Bander Operator

SY System Administrator

RO Roller

Author TAP 4	Document HSM_D6 Description of Alarms.doc		Date 1996-02-28	Version as built	Page 2
-----------------	--	--	--------------------	---------------------	-----------

2. Alarm Messages

Primary Data invalid

- Description: The piece data for slab identified by slab ID contain no or unplausible data.
- Consequence: No pass schedule is generated
- Responsibility: RO
- Correction: Verify piece data and correct invalid data items; if it happens repeatedly, corrective actions at RHF, Caster or Level 3 have to be done (inform SY)

No Primary Data found

- Description: The piece data for the slab identified by SLABID are missing.
NO LEVEL 2 ROLLING POSSIBLE !
- Consequence: No finishing mill pass schedule is created.
- Responsibility: RO
- Correction: Have furnace map repaired and resent on Level 2 FURNACE computer

Author TAP 4	Document HSM_D6 Description of Alarms.doc		Date 1996-02-28	Version as built	Page 3
-----------------	--	--	--------------------	---------------------	-----------

No Target Data Rmgeneral

Description: No Target data general present.

NO LEVEL 2 ROLLING POSSIBLE

in roughing mill and finishing mill.

Consequence: No finishing mill pass schedule is created.

Responsibility: SY

Correction: Create the specific roughing mill reference pass schedule.

No Target Data RM pass

No SetupData RMgeneral

No SetupData RM pass

Description: No Target data for RM are present.

NO LEVEL 2 ROLLING POSSIBLE

in roughing mill and finishing mill.

Consequence: No finishing mill pass schedule is created.

Responsibility: SY

Correction: Create the specific roughing mill reference pass schedule.

Author TAP 4	Document HSM_D6 Description of Alarms.doc		Date 1996-02-28	Version as built	Page 4
-----------------	--	--	--------------------	---------------------	-----------

No SetupData Cooling

Description: The cooling recipe from the piece data is not valid.

NO COOLING SETUP IS SENT

Consequence: No cooling setup is sent.

Responsibility: SY

Correction: Create a cooling setup table

No general mill data

Description: The general model data record is missing

NO PASS SCHEDULE IS CREATED

Consequence: No level2 pass schedule

Responsibility: SY

Correction: Create the general model data record

No Steelgrade Reference

Description: The steelgrade described in the piece data is not yet prepared in the steelgrade reference table

Consequence: NO LEVEL2 PASS SCHEDULE for roughing mill and finishing mill

Responsibility: SY

Correction: Introduce the steel grade by creating a steel grade reference and the corresponding material law tables.

Author TAP 4	Document HSM_D6 Description of Alarms.doc		Date 1996-02-28	Version as built	Page 5
-----------------	--	--	--------------------	---------------------	-----------

No Material Law

Description: For this steelgrade, the corresponding material law is not present.

Consequence: NO LEVEL2 PASS SCHEDULE for finishing mill

Responsibility: SY

Correction: Create the corresponding material law

No Material Property

Description: For this steelgrade, the corresponding material property record is not present.

Consequence: NO LEVEL2 PASS SCHEDULE for finishing mill

Responsibility: SY

Correction: Create the corresponding material property record

No DescalingTab

Description: For this steelgrade, the corresponding descaling table is not present.

Consequence: NO LEVEL2 PASS SCHEDULE for finishing mill

Responsibility: SY

Correction: Create the corresponding descaling table

Author TAP 4	Document HSM_D6 Description of Alarms.doc		Date 1996-02-28	Version as built	Page 6
-----------------	--	--	--------------------	---------------------	-----------

No IntCoolTab

Description: For this steelgrade, the corresponding interstand cooling table is not present.

Consequence: NO LEVEL2 PASS SCHEDULE for finishing mill

Responsibility: SY

Correction: Create the corresponding descaling table

No Looper Table

Description: For this steelgrade, the corresponding looper tables are not present.

Consequence: NO LEVEL2 PASS SCHEDULE for finishing mill

Responsibility: SY

Correction: Create the corresponding descaling table

No Rolling Strategy

Description: For this steelgrade, the corresponding rolling strategy is not present.

Consequence: NO LEVEL2 PASS SCHEDULE for finishing mill

Responsibility: SY

Correction: Create the corresponding descaling table

Author TAP 4	Document HSM_D6 Description of Alarms.doc		Date 1996-02-28	Version as built	Page 7
-----------------	--	--	--------------------	---------------------	-----------

No RollGeometry

- Description: For this rolls, the corresponding roll geometry record is not present.
- Consequence: NO LEVEL2 PASS SCHEDULE for finishing mill
- Responsibility: SY
- Correction: Create the corresponding roll geometry record by resending the rolls from Level3

No Stretchcurve RM

- Description: The millstretch record of the roughing mill is missing
- Consequence: NO LEVEL2 PASS SCHEDULE for finishing mill
- Responsibility: SY
- Correction: Create the millstretch record for roughing mill

No Stretchcurve FM

- Description: A stretchcurve record of the finishing mill is missing.
- Consequence: NO LEVEL2 PASS SCHEDULE for finishing mill
- Responsibility: SY
- Correction: Create the stretchcurve finishing mill.

Author TAP 4	Document HSM_D6 Description of Alarms.doc		Date 1996-02-28	Version as built	Page 8
-----------------	--	--	--------------------	---------------------	-----------

No Adaptors

Description: The short time adaptor record is missing.

Consequence: NO LEVEL2 PASS SCHEDULE for finishing mill

Responsibility: SY

Correction: Create the short time adapter record.

No RollData

Description: For this rolls, the corresponding roll record is not present.

Consequence: NO LEVEL2 PASS SCHEDULE for finishing mill

Responsibility: SY, OPFM

Correction: Check in "Roll Inventory" mask which roll is missing. Create the corresponding roll record by resending the rolls from Level3 or by creating the roll record in the mask "roll inventory".

No StandData

Description: For a stand, the corresponding stand data record is not present.

Consequence: NO LEVEL2 PASS SCHEDULE for finishing mill

Responsibility: SY

Correction: Create the corresponding stand data record.

Author TAP 4	Document HSM_D6 Description of Alarms.doc		Date 1996-02-28	Version as built	Page 9
-----------------	--	--	--------------------	---------------------	-----------

No RollGeometry

- Description: For this rolls, the corresponding roll geometry record is not present.
- Consequence: NO LEVEL2 PASS SCHEDULE for finishing mill
- Responsibility: SY
- Correction: Create the corresponding roll geometry record by resending the rolls from Level3

No General Data

- Description: The general mill data record is not present.
- Consequence: NO LEVEL2 PASS SCHEDULE for finishing mill
- Responsibility: SY
- Correction: Create the general mill data record.

Edger Diameters unplaus

- Description: The general mill data record contains unplausibe edger diameters.
- Consequence: NO LEVEL2 PASS SCHEDULE for finishing mill
- Responsibility: SY, OPFM
- Correction: Correct the edger diameters using the mask "Roll Inventory".

Author TAP 4	Document HSM_D6 Description of Alarms.doc		Date 1996-02-28	Version as built	Page 10
-----------------	--	--	--------------------	---------------------	------------

Error accessing Data

Description: One or more of the necessary records from the memory data base is missing.

Consequence: NO LEVEL2 PASS SCHEDULE for finishing mill

Responsibility: SY

Correction: Create the missing record(s).

Thickness not reached NO PASS SCHEDULE

Description: The pass schedule calculation was unable to create a pass schedule considering the limits.

If the switch "limit checks" in the mask "Finishing Mill Pass Schedule, advanced" is "off", the only limits to be checked is the minimal and the maximal rolling speed of the stands.

Consequence: NO LEVEL2 PASS SCHEDULE for finishing mill

Responsibility: OPFM, RO

Correction: Check target data in "Primary Data" mask. When the reason is eliminated, calculate again.

Author TAP 4	Document HSM_D6 Description of Alarms.doc		Date 1996-02-28	Version as built	Page 11
-----------------	--	--	--------------------	---------------------	------------

Thickness increased by 0.xx

STRIP THICK 0.yy

Description: The pass schedule calculation was unable to create a pass schedule for the given target thickness considering the mill limits. Instead, a pass schedule for an alternative strip thickness is sent.

If the switch "limit checks" in the mask "Finishing Mill Pass Schedule, advanced" is "off", the only limits to be checked is the minimal and the maximal rolling speed of the stands.

Consequence: A pass schedule for an alternative (more heavy) gauge is sent.

Responsibility: OPFM, RO

Correction: With the Setting "limit switch OFF" and "Load Strategy", you can calculate a pass schedule for the required exit thickness. In this switch setting, excessive rollforces and motorloads are not crosschecked by the model.

Poor MeasValues

Description: The measured values of speed and/or thickness are insufficient for a proper adaptation.

Consequence: No automatic adaptation is done for this bar

Responsibility: OPFM, RO

Correction: Check if thickness gauge is on and speed actual values are present. If the message repeats to occur, call system administrator for support.

Author TAP 4	Document HSM_D6 Description of Alarms.doc		Date 1996-02-28	Version as built	Page 12
-----------------	--	--	--------------------	---------------------	------------

No Calculated Values

Description: The adaptation did not find calculated values.

Consequence: No adaptation for this strip.

Responsibility: OPFM, RO

Correction: If this strip was rolled using a model setup (for this bar; check 1. for "Pass schedule sent" message" on Level2, 2. for error message on Level1) call system administrator.

No measured Values RM

No Calc, no measVal RM

Description: The measured values of the roughing mill area are missing.

Consequence: No automatic rollforce, torque and temperature adaptation is done for this strip.

Responsibility: OPFM, RO

Correction: If the strip was rolled in Level2 mode on Roughing Mill, call the system administrator for support.

Author TAP 4	Document HSM_D6 Description of Alarms.doc		Date 1996-02-28	Version as built	Page 13
-----------------	--	--	--------------------	---------------------	------------

Gauge not plausible

Description: The measured values of the X-Ray gauge are not plausible.

Consequence: No thickness adaptation is done for this strip.

Responsibility: OPFM, RO

Correction: Call the system administrator for support.

Com: Error send PSC

Description: A communication error occurred sending the calculated pass schedule to the Level1 automation

Consequence: No Level2 rolling possible

Responsibility: OPFM, RO

Correction: Call the system administrator for support.

Author TAP 4	Document HSM_D6 Description of Alarms.doc		Date 1996-02-28	Version as built	Page 14
-----------------	--	--	--------------------	---------------------	------------

3. Information Messages

hh:mm PRG SLABID thick SpeedCorr +c/+c/+c/+c/+c TempDev dev [oF]

<i>thick</i>	strip target exit thickness in [in]
<i>+c/+c/+c/+c/+c/+c</i>	speed corrections for Stand F1 to F6 in %
<i>dev</i>	deviation of the calculated headend temperature to the maximum value of the target temperature on the pyrometer on the finishing mill exit side
Appears	after each successful pass schedule precalculation or pass schedule calculation.

hh:mm PRG SLABID thick SpeedCorr +c/+c/+c/+c/+c TempDev dev [oF]

<i>thick</i>	strip target exit thickness in [in]
<i>+c/+c/+c/+c/+c/+c</i>	speed corrections for Stand F1 to F6 in %
<i>dev</i>	deviation of the calculated headend temperature to the maximum value of the target temperature on the pyrometer on the finishing mill exit side
Appears	after each successful pass schedule precalculation or pass schedule calculation if speed adaptation is on.

Author TAP 4	Document HSM_D6 Description of Alarms.doc		Date 1996-02-28	Version as built	Page 15
-----------------	--	--	--------------------	---------------------	------------

hh:mm PRG SLABID thick GaugeCorr +c/+c/+c/+c/+c TempDev dev [oF]

<i>thick</i>	strip target exit thickness in [in]
<i>+c/+c/+c/+c/+c</i>	gauge corrections for Stand F1 to F6 in [mil]
<i>dev</i>	deviation of the calculated headend temperature to the maximum value of the target temperature on the pyrometer on the finishing mill exit side
Appears	after each successful pass schedule precalculation or pass schedule calculation if model is switched to gauge correction.

hh:mm PRG SLABID Pass Schedule Sent vF1 dev grade thick/width

<i>dev</i>	Speed variation from precalculated speed (only if <i>PRG</i> is the calculation). This speedup/slowdown of the mill refers to the speed of stand F1. The speedup/slowdown of the mill is be disabled by a flag in the "General Model Data". To enable the speedup/slowdown, call the system administrator for assistance.
<i>grade</i>	steel grade of the strip
<i>thick</i>	strip target exit thickness in [in]
<i>width</i>	strip target exit width in [in]
Appears	when a pass schedule is sent: For calculation after the last load pass roughing mill if switch "Calculation" is on. For precalculation after furnace discharge or if the "Setup data Finishing Mill" mask is in "default" mode and the button "send pass schedule" is pressed.

Author TAP 4	Document HSM_D6 Description of Alarms.doc		Date 1996-02-28	Version as built	Page 16
-----------------	--	--	--------------------	---------------------	------------

hh:mm ADA SLABID vRoll +d/+d/+d/+d/+d/+d -> +c/+c/+c/+c/+c/+c [%]

+d/+d/+d/+d/+d/+d speed deviation from setpoint speed for Stand F1 to F6 in [%]

+c/+c/+c/+c/+c/+c new total speed adaptors for Stand F1 to F6 in [%]

Appears if speed adaptation is on, after each bar that is rolled as soon as the speed adaptation is finished and valid.

hh:mm ADA SLABID msgld grade Adapt Thickness +xx.xx->+yy.yy [mil]

msgld Number of the invoking telegram

grade steel grade of the adapted strip

+xx.xx previous thickness adapter in [mil]

+yy.yy new thickness adapter in [mil]

Appears if thickness adaptation is on, after each bar that is rolled as soon as the thickness adaptation is finished and valid.
